System Requirements for Healthnut Chatbot

What is Pandorabots?

Pandorabots is a free web service that is used for building, hosting, and deploying chatbots. The Pandorabots playground is a sandbox that we used for testing and creating our bot prototype.

What do I need to talk to the bot?
- Favorite web browser application
- Account on Pandorabots Playground

How can I access the bot without an account on Pandorabots?
- Without coding experience, it will be difficult to upload a bot independently for the school to use without an account. Here is an overview.
- There are several things that are required before publishing a bot on the web:
    - Head over to AIaaS to learn about the benefits of using artificial intellegence as a service: https://developer.pandorabots.com
    - In the documentation of AIaaS, you can find how to install and use this API: https://developer.pandorabots.com/docs
    - You must purchase a plan to host the bot. They range from $9-999 a month. We estimate that $9/mo will be sufficient.
- After registering and paying for a plan to host a bot, you must install node.js (https://nodejs.org/en/) and the command line interface for the AIaaS interface, npm.
- Then you must configure the bot, download the bot files, upload the bot to the cloud, and talk to the bot.
- All documentation for quick start can be found here: https://developer.pandorabots.com/#quickstart
- Full documentation for the service: https://developer.pandorabots.com/docs

Healthnut Files

All files for the healthnut chatbot can be found and downloaded here:
